

Control for a **GREEN** Environment

A SIMPLE SOLUTION TO OPTIMIZE HVAC EFFICIENCY

Maintain Constant Pressure Differential Across Anything!

Use the Pressure Independent Modular (PIM™) system to maintain a constant pressure differential across an existing control valve, new control valve, coil, branch, ball valve...

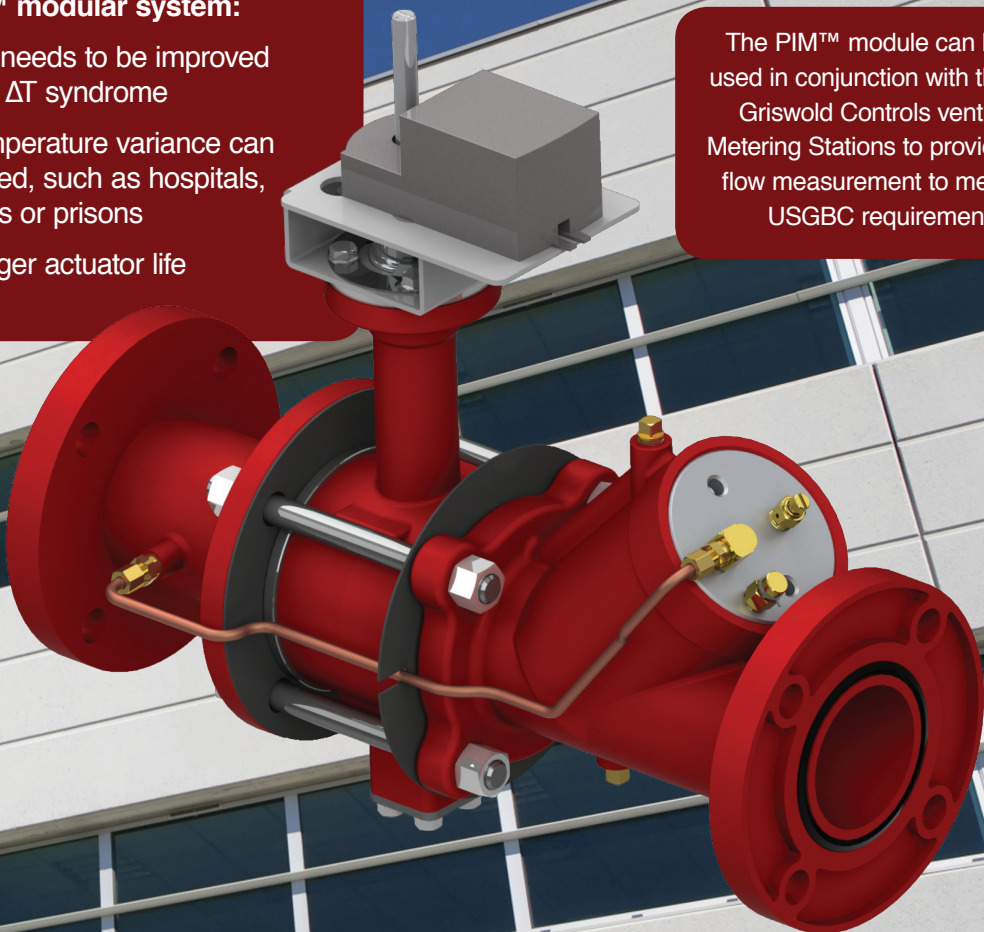

...the possibilities are endless!

Use the PIM™ modular system:

- Where ΔT needs to be improved due to low ΔT syndrome
- Where temperature variance can not be risked, such as hospitals, laboratories or prisons
- Where longer actuator life is required

The PIM™ module can be used in conjunction with the Griswold Controls venturi Metering Stations to provide flow measurement to meet USGBC requirements.
