The EPIC System measures energy usage while monitoring coil performance to adjust a Pressure Independent (PI) Control Valve to optimize coil performance. The PI Valve maintains the correct flow, in spite of pressure changes, and guarantees the flow only changes when demand requirements change or Delta T is outside of specification.

The EPIC System is fully customizable and allows selection of components that work best to optimize the application’s unique energy goals.
TAKE CHARGE OF YOUR SYSTEM'S LOW DELTA T WHILE SAVING PUMP ENERGY WITH THE EPIC SYSTEM

Control your system ΔT with the Pressure independent & Temperature Independent EPIC System!
Available in ½” to 10” Size

PI Valve
Maintains correct flow in spite of pressure changes and guarantees that flow and actuator position only change with demand requirements change or ΔT is outside of specification. By optimizing ΔT, flowrates are reduced and pump energy is conserved.

Temperature Sensors
Temperature sensors measure the ΔT across the coil or AHU, allowing the EPIC Controller to adjust the PI valve to a flowrate that optimizes the ΔT.

Pressure Sensors
Pressure sensors measure the upstream and downstream pressures, allowing the BMS to reduce system pressure to the PI valve’s minimum requirements reducing pump energy. (2-1/2” to 10” sizes)

Flow Meter
EPIC Controller calculates the flowrate and displays it on Bluetooth device as well as sending the flow back to the BMS.

BTU Meter
EPIC Controller calculates the BTU and displays it on Bluetooth device. The BTU can be calculated by the BMS by using the ΔT and flowrate supplied by the EPIC Controller allowing BTU monitoring of each zone in the system.

Bluetooth® Enabled
In combination with the Griswold Controls App the information can be accessed easily on your Bluetooth enable device.
