ACCESSIBLE CARTRIDGE

SPECIFICATIONS

PSI/Temperature Rating: 1/2"-1-1/2": 600 WOG 400 PSI / 250° F

1-1/2"L-3": 400 WOG 275 PSI / 250°F

Cartridge: AISI Type 304 stainless steel

AISI Type 17-7 PH stainless steel spring 1/2"-1-1/2": Forged brass ASTM B283-06 **Body Material:**

1-1/2"L-3": Cast brass

End Connections: Brass - NPT, Sweat or QuickPress1

Ball Valve Seals: Teflon

Ball Valve:

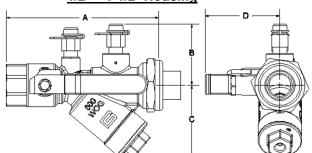

EPDM O-Ring Union Seal:

Body Tappings²: Two Combination P/T Test Valve and

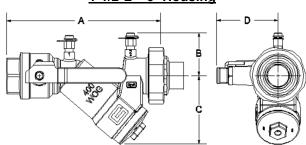

Manual Air Vent (CPTA) Nickel-plated brass ball

Optional: Stainless Steel ball Field Repairable Stem: Dual Teflon seals and EPDM O-ring

1/2" - 1-1/2" Housing

1-1/2"L - 3" Housing

DIMENSIONS & WEIGHTS (NOMINAL)

For QuickPress connections add 3.1" (1/2", 1/2"L) 3.6" (3/4", 3/4"L), 4.1" (1") to the FNPT length (A) listed for a valve.

NOTES

- 1 QuickPress is available on 1/2" to 1" valves. Connections are compatible with popular press tools and are rated for maximum 200 PSI.
- ² Body Tappings for accessories are a leak proof metal to metal seal and do not require pipe dope or tape. Tape or dope should not be used.

³ For overall length, add union end connection length to body length.

⁵ Cv's are based on housing without cartridge.

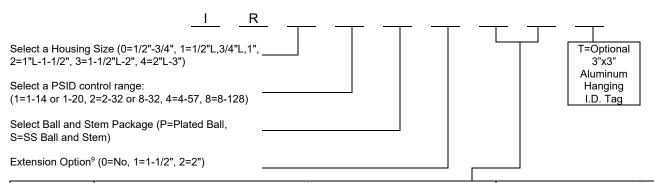

⁷ 1-1/4"-1-1/2" valves can also take 1/2"-3/4" MNPT tailpieces.

⁴ Space Saver handle standard on 1/2"-3/4" valves. Standard handle on 1" to 3" valves and 1-1/2" extended handle in 1/2" to 3" is compatible with 1-1/2" insulation. Largest extended handle is compatible with 2" insulation.

⁶ Tailpiece is not available for this size. Male tailpiece used with ASME B16.15 Class 125 coupling.

⁸ 2-1/2" and 3" Valves are fixed end by fixed end connection. Union connection is not available.

NOTES

This specification © 2024 Griswold Controls

3/24 F-5386N

⁹ Extension Option includes handle cover and accessory extensions for either 1-1/2" or 2" Insulation.

¹⁰ Select the Fixed End First and the Union End Second. For 2-1/2" and 3" size select a 2nd fixed end instead of a union end.

¹¹ Tailpiece is not available for this size. Male tailpiece used with ASME B16.15 Class 125 coupling.

¹² Fixed end not available for this size. Union tailpiece only.

¹³ Head Loss in Feet is provided for pump head calculations. (1 PSI = 2.307 Feet of Water)

¹⁴ While valve will control the flow through the high end of PSID range, there is a limit to the maximum PSID across the cartridge before cavitation occurs. A conservative guide is: Maximum Allowable Pressure Drop = 0.5 (Inlet Pressure - Water Vapor Pressure). Cavitation is an effect that occurs when the fluid vaporizes as it goes through a port opening. As the fluid exits the port the vapor bubbles collapse back into a liquid state. The vapor bubbles imploding cause noise and vibration in the valve and can eventually destroy valves. This phenomenon is amplified when entrained air is in the system. If cavitation is a concern, then selecting a stiffer spring like 4-57 or 8-128 can help reduce risk.
